

OEC AG is a leading service provider for optical design. We focus on the field of illumination optics, in which we have unique experience and mathematical tools. Our team designs optical systems until the start of production in close collaboration with customers. Because our work is rooted in scientific research, we incorporate the most recent findings into our work, and therefore are able to offer novel solutions. Then again we support our customers in product development until serial production, hence understand how to provide the outcome of our work conform to industrial standards.

Beam Shaper For
"DARWIN"**

**Visit our booth at
LASER World of PHOTONICS
15-18 June 2009
Hall B1, booth 409**

In addition to illumination optics we are also knowledgeable in classical imaging optics. Thus we qualify for complex, cross-disciplined but also exotic solutions. In order to do so, we use the creative potential of our whole team – our best solutions are a result of the highly qualified and experienced team of optical designers.

We complete our services by distributing the most professional software packages for optical design, Optical Research Associates' CODE V® and *LightTools*®. Often we link our competencies and help familiarise our customers with the professional use of the optics software within real projects. Because we use these software packages on a daily basis, we are particularly qualified for this. We also offer training in optical design software and the design of optical systems.
