

At FISBA we develop high-grade solutions in the field of micro- and macro-optics. Sound experience gained over many years coupled with a fervent spirit of innovation are the foundation on which we build. Thoroughly trained and highly motivated staff in research, development and production are dedicated to finding sustainable system solutions that boost your success - now and in the future.

Optical Solutions. By FISBA.

FISBA OPTIK is a world leader in optical systems, instruments and components. Swiss quality and precision are key product features. But we are far more than just a manufacturer of optics. We see ourselves as a partner to our customers. And as such we work closely with you to develop solutions that deliver both technical and economic success.

From simple lenses to complex optic components, the optical solutions created by FISBA are always perfectly tailored to your specific demands and wishes. In fact, our capable team of highly motivated experts achieves results that often even surpass the requirements.

We develop and manufacture lenses, laser modules, micro-optics and advanced optical components for industrial applications. Further areas of expertise comprise metrological applications as well as the development of completely customized solutions.

We consider the task at hand as a whole. Because it is only as a problem solver that we can enhance our clients' success. That is why our company culture is defined by knowledge transfer, experience and an innovative spirit. We also place great value on carefully structured training of our staff - including a specific development program for young specialists. Through this we create a successful future together with you - our customer.
